

JETICING AT

Anti-Icing Fuel Treatment

DESCRIPTION

A high flash point fuel system icing inhibitor formulated specifically for aircraft turbine engine fuel. Engineered to significantly reduce the freezing point of any water present in the fuel system, preventing ice crystal formation that could obstruct fuel flow and degrade engine performance.

FEATURES

- High flash point characteristics
- Reduces water freezing point in fuel systems
- Prevents ice crystal obstruction
- Maintains optimal fuel flow in cold climates
- Enhances engine efficiency
- Enhanced reliability in critical conditions
- Reduced maintenance costs
- Safe operation in challenging weather conditions
- Improved safety during handling and storage

PACK SIZES

Multiple pack sizes available on request.

APPLICATIONS

- Aircraft turbine engine fuel systems
- Cold weather aviation operations
- Moisture-prone fuel systems

PRODUCT CHARACTERISTICS

PROPERTY	TYPICAL VALUE
Specification / approval	MIL-DTL-85470 B

Typical values shown do not constitute a specification. The information is based on current knowledge and is intended to describe the product for possible applications; it does not release the user from performing preliminary tests.
