

TURBO M-10

Aeronautical Turbine Lubricant

DESCRIPTION

A high-performance aircraft-type gas turbine lubricant formulated with polyalphaolefin and synthetic ester base oil, enhanced with specialized additives. Demonstrates improved anti-wear performance, low evaporation rate, high lubricating properties, high thermo-oxidative stability and excellent resistance to foaming.

FEATURES

- Improved anti-wear performance
- Low evaporation rate
- High lubricating properties
- High thermo-oxidative stability
- Excellent resistance to foaming

PACK SIZES

Multiple pack sizes available on request.

APPLICATIONS

- Heat-stressed gas-turbine engines for military and civil aircraft with outlet oil temperatures reaching 200 C
- Aircraft cooling turbines as primary oil
- Other engine assemblies, including powered gas compressing plants

PRODUCT CHARACTERISTICS

PROPERTY	TYPICAL VALUE
Operating temperature range	-50 C to +200 C
Specification / approval	TU 38.1011299-2006

Typical values shown do not constitute a specification. The information is based on current knowledge and is intended to describe the product for possible applications; it does not release the user from performing preliminary tests.
